Quality Solutions For All Growers...

Automatic Bin Tipping Systems

At KW Automation, we design and manufacture advanced Bin Tipping Systems to provide automated solutions for growers. Discover how these systems can boost efficiency in your packing shed, optimizing your workflow and productivity.

Bin Conveying Systems

Our Bin Infeed & Outfeed Systems are designed to keep your operation running smoothly and efficiently. With the Bin Infeed System, operators can stack two sets of three bins filled with fruit, letting the system handle the rest. The De-Stacking System moves single bins into the Bin Tipper, where they are tipped, then are seamlessly conveyed to the Bin Stacking System, which restacks the bins up to three high. From there, bins are directed to the collection station for easy pickup by a forklift operator, ready for storage.

KW Bin Tipping

Soft Bin Tipping and Standard Automatic bin tipping is available for all Automatic Bin Tipping Systems. Whatever produce you need to tip or procedures you need to follow, KW has the solutions for you.

- Robust, Durable Construction
- Custom Bin Compatibility
- Adaptable Loading Options
- Floor-Level Accessibility
- Complete Two-Year Warranty & Support
- Australian Made Quality
- Performance
